Study guide for Exam AB-620: Designing and Building Integrated AI Agent Solutions in Copilot Studio

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Useful links	Description
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured

Audience profile

As a candidate for this Microsoft Certification, you're a professional developer or advanced builder who builds, extends, and integrates custom agents for enterprise-grade solutions. You typically work as an IT application developer, consultant, or independent software vendor (ISV) partner focused on creating scalable AI solutions for organizations or customers.

For this exam, you should be familiar with Power Fx, Microsoft Dataverse, Microsoft Power Platform environments and components, Microsoft 365 Copilot, Microsoft Foundry, and adaptive cards.

You need intermediate knowledge of generative AI concepts, including models, orchestration, retrieval-augmented generation (RAG), Model Context Protocol (MCP), Agent2Agent (A2A) protocol, and more. You should also have experience with prompt engineering and with REST APIs and integration patterns. Additionally, you need experience configuring agents with basic knowledge sources, instructions, tools, and topics in Microsoft Copilot Studio.

As a developer who works in Copilot Studio, you:

- Integrate agents with Microsoft Foundry.
- Integrate agents with Model Context Protocol (MCP) servers.
- Integrate agents with custom connectors.
- Integrate agents with APIs.
- Integrate agents with Microsoft Fabric.
- Automate tasks with computer use.
- Integrate agents with connectors.

You create:

- Multi-agent solutions.
- Agents with enterprise knowledge sources (such as ServiceNow, SAP, and others).

- Advanced agent topics and tools.
- Computer-using agents.
- Agents that perform advanced actions via APIs.

You collaborate with Microsoft 365 administrators, Microsoft Power Platform administrators, Microsoft Copilot administrators, Copilot Studio agent builders, Copilot Studio administrators, Foundry administrators, agentic AI business solutions architects, and Copilot Studio architects.

Skills at a glance

- Plan and configure agent solutions (30–35%)
- Integrate and extend agents in Copilot Studio (40–45%)
- Test and manage agents (20–25%)

Plan and configure agent solutions (30–35%)

Plan an agent solution

- Plan integration with enterprise systems
- Plan identity strategy
- Plan channels and deployment
- Plan responsible AI strategy
- Evaluate security and governance considerations
- Plan reuseable agent components
- Design agents for internal or external audiences

Create and monitor agent flows in Copilot Studio

- Create an agent flow
- Create a human-in-the-loop agent flow
- Configure actions and connectors
- Monitor agent flows

- Add input and output parameters
- Implement error handling in agent flows

Configure topics

- Add agent flows to a topic
- Configure agent response formatting
- Add tools to a topic
- Configure advanced agent responses with custom prompts
- Configure advanced agent responses with custom knowledge sources
- Configure advanced agent responses with API and Send HTTP requests
- Configure generative answers node
- Configure adaptive cards
- Manage variables

Integrate and extend agents in Copilot Studio (40–45%)

Connect to enterprise knowledge sources

- Connect to Copilot connectors
- Connect to Microsoft Power Platform connectors
- Connect to Azure AI Search

Add tools to agents

- Configure and monitor computer use for an agent
- Configure MCP tools
- Add a tool by using an existing custom connector
- Add REST APIs to an agent

Configure multi-agent collaboration from Copilot Studio

- Design multi-agent solutions in Copilot Studio
- Integrate a Foundry agent
- Integrate an existing agent in Copilot Studio
- Integrate a Fabric data agent
- Create a multi-agent solution by using A2A protocol

Integrate agents with Azure

- Configure generative answers by using Azure AI Search with Foundry
- Configure custom prompts to use the Foundry model catalog
- Monitor agents by using Application Insights

Test and manage agents (20–25%)

Evaluate agent performance

- Create a test set
- Choose an evaluation method
- Review test results

Implement application lifecycle management (ALM) for agents in Copilot Studio

- Create a solution
- Add existing agents to a solution
- Create and use environment variables
- Implement and extend Microsoft Power Platform Pipelines

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.
